PERSONAL PORTFOLIO · STORYBOARD V1 · OCT 2026

ゴゴゴ

Ilyas Ishenaliev, *in collage*

The plan for a personal site that shows your video and social content, your creative projects and your experience. It should feel like a scrapbook made by someone with taste: Ralph Lauren polish, Vox-style annotation, and colour that changes as often as Araki recolours a panel.

SWAP PALETTE · 4 OF 4

THE BRIEF

What the site has to do

MAIN JOB

Show the work. Visitors should leave knowing what you make and how good it is.

SECOND JOB

Grow the audience a little. Make following you on each platform a one-click move.

LEAVE OUT

Hire-me buttons, service lists, pricing. You're not taking clients or collabs right now.

CONTENT

Mostly videos and social posts, plus creative projects and a short experience record.

CREATIVE DIRECTION

Three references, one rule each

The collage only works if each influence has a job. Otherwise it reads as noise. Each reference supplies one layer of the system.

Ralph Lauren

Heritage, navy, crests, stitched labels, a catalogue's calm grid.

Gives us: the structure. Serif headings, navy ink, oxford-blue paper, ledger-style lists.

Vox

Explainer collage: cut-outs, highlighter, hand-drawn circles and arrows.

Gives us: the voice. Annotations that point at things and explain why they matter.

JoJo / Araki

Unexpected colour, fashion poses, sound effects like ゴゴゴ, “To Be Continued”.

Gives us: the energy. Colour that shifts, bold display type, dramatic cut-out photos.

OXFORD	NAVY	ACCENT 1	ACCENT 2	ACCENT 3	ACCENT 4

DISPLAY	**MENACING**
SERIF	*Est. in good taste*
BODY	Readable sans for captions, bios and case-study text.
NOTES	`← margin notes & labels`

Navy and oxford stay fixed. Only the four accents rotate, so the site still reads as one brand in every palette.

The signature move is the palette swap. Like Araki recolouring a character between panels, the site re-inks itself on a click or on each visit. Try the button above.

Collage at the edges, calm in the middle. Text you need to read sits on flat paper. The chaos lives around it.

Use your own material. Your photos, your scans, your footage. Point to the inspirations, but don't paste in their artwork.

SITEMAP

Five pages, one long home

Home does most of the work as a scroll story. Each other page goes deeper on one part of it.

/

Home

The full story in one scroll. Storyboard frames 1–7 below.

/work

Work

Creative projects as clippings, each opening a case page.

/work/[slug]

Project page

Hero, what it is, your role, process, results.

/content

Content

Every video and post, filterable by platform.

/about

About

Longer bio, the inspirations wall, experience ledger.

/now

Now (optional)

What you're making and watching this month. Easy to keep fresh.

STORYBOARD · HOME, IN SCROLL ORDER

Seven frames, top to bottom

Rough wireframes, not final art. Colour blocks stand in for your photos and thumbnails.

CREATOR · VIDEO · PROJECTS

SWAP COLOUR

FRAME 1 · HERO

The entrance pose

ON SCREEN

Your name in huge display type, tilted. A cut-out photo of you in a strong pose. Halftone dots, tape, a floating ゴゴゴ.

MOTION

Layers drift slightly with the cursor. The round stamp swaps the whole site's palette.

PURPOSE

Within three seconds people know whose site this is and that it has personality.

I make videos and creative projects about the things I find beautiful, from fashion to film to whatever caught my eye this week.

← THE WHOLE POINT

EST. 20XX · BASED IN ___

FRAME 2 · INTRO

The Vox margin notes

ON SCREEN

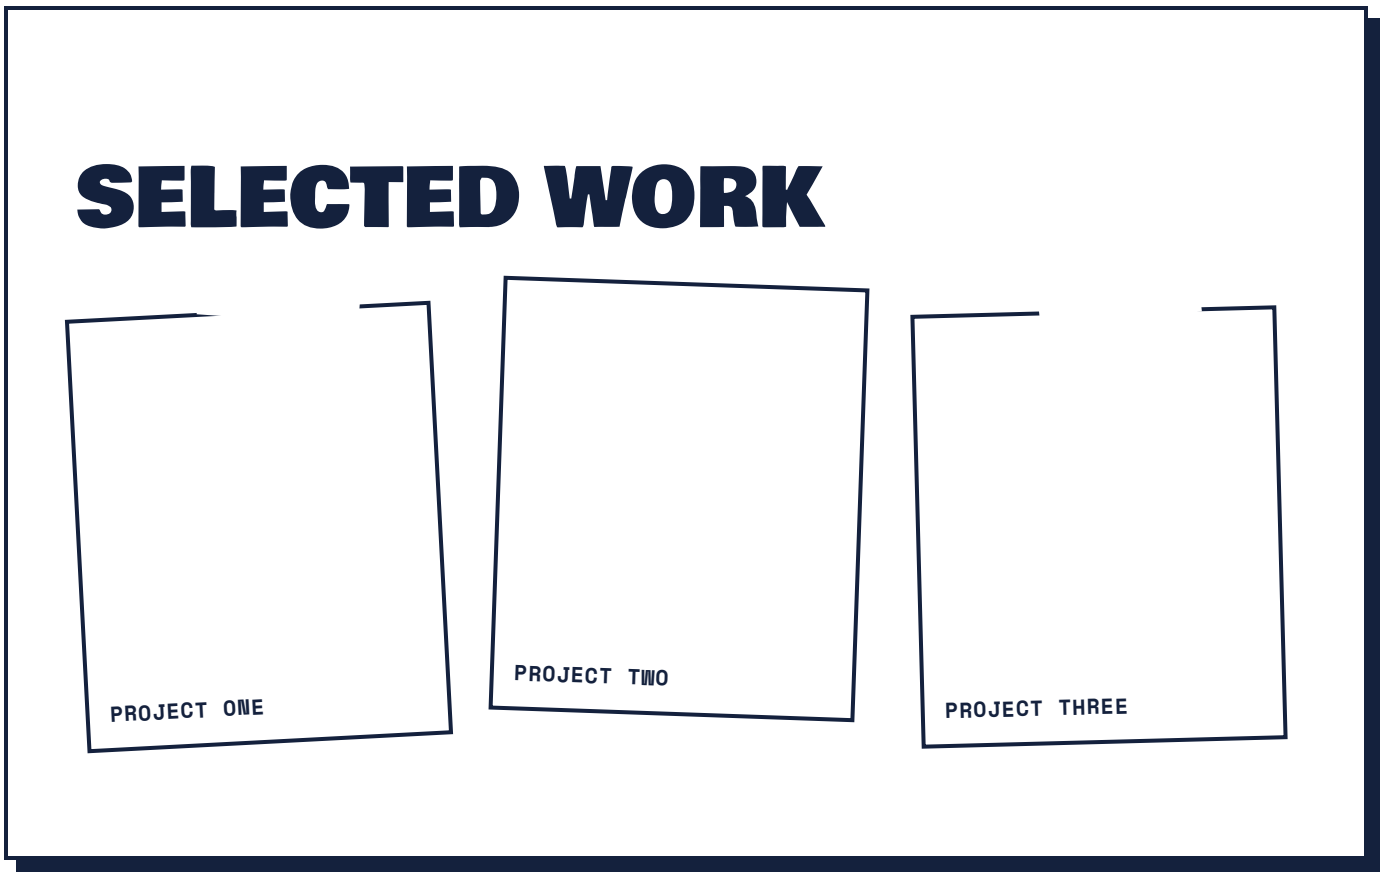

One or two sentences in large serif. Highlighter on the key phrase, a hand-drawn circle, a mono margin note with an arrow.

MOTION

The highlighter and circle draw themselves on as the line scrolls into view.

PURPOSE

Says who you are and what you make in your own voice.

FRAME 3 · FEATURED WORK

Clippings on the table

ON SCREEN

Your 3 best projects as taped-down magazine clippings, each with a cover image, title and one-line hook.

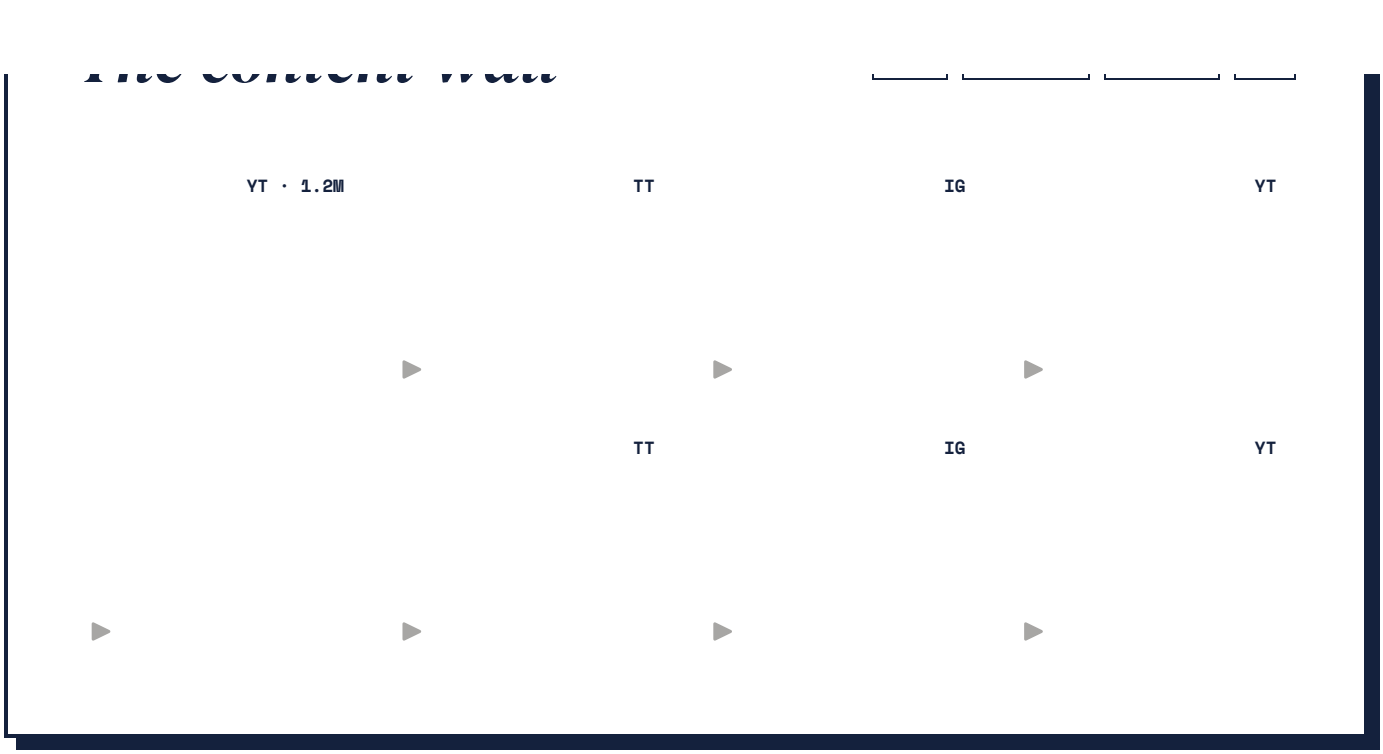

MOTION

On hover a card straightens, lifts and shows its accent colour. Click opens the project page.

PURPOSE

Gets your strongest work in front of everyone, including people who stop scrolling here.

FRAME 4 · CONTENT

The wall of thumbnails

ON SCREEN

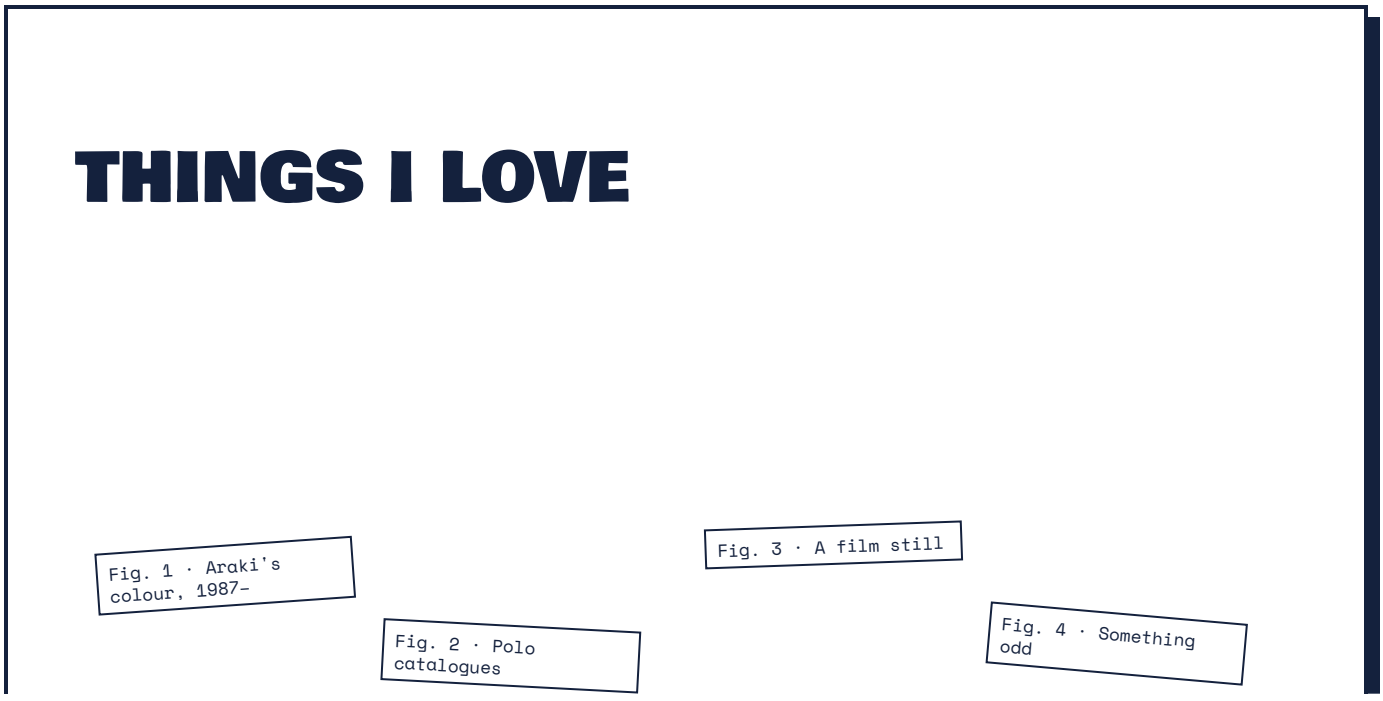

Mixed-size thumbnails with a platform stamp and view count on each. Your top video gets the tall slot.

MOTION

Hover plays a short muted preview. Click opens a lightbox with the embed and a link to the original post.

PURPOSE

Shows range and reach. Leads into the full `/content` page.

FRAME 5 · INSPIRATIONS

The taste wall

ON SCREEN

4–8 things you love: shows, designers, albums, objects. Each has a gallery-style label and one line on why it matters to you.

MOTION

Items can be dragged around the wall. Positions reset on reload.

PURPOSE

Your taste is part of the brand. This section makes the collage personal.

The record

II

2026	ROLE · ORGANISATION
2025	ROLE · ORGANISATION
2024	ROLE · ORGANISATION
2023	ROLE · ORGANISATION

FRAME 6 · EXPERIENCE

The heritage ledger

ON SCREEN

The calmest frame: years in serif, roles and organisations in mono, thin navy rules, a small monogram crest.

MOTION

Barely any. Rows slide in once. Fewer effects here makes the louder frames hit harder.

PURPOSE

A credible record for anyone checking your background. Links to a CV if you want one.

FRAME 7 · FOOTER

To Be Continued

ON SCREEN

The JoJo-style arrow as the sign-off, with social links next to it and an optional email signup.

MOTION

The arrow slides in from the left as the page ends, with a sepia-tint flash for fans who get the reference.

PURPOSE

The audience-growth moment. Ending on "to be continued" invites a follow, not a sale.

ROLE

YEAR

TOOLS

PLATFORM

“One line that explains why it worked.”

NEXT PROJECT →

TEMPLATE · /WORK/[SLUG]

The project page

ON SCREEN

Full-bleed hero with a title label stuck on it. A fact column (role, year, tools, platform), then the story: idea, process, result.

CONTENT PER PROJECT

A cover image, 3–8 process images or clips, about 200–400 words, and one standout stat or quote.

PURPOSE

Depth for people who want it, ending on the next project so they keep going.

FROM DESIGN TO LIVE SITE

The build plan

Six phases in order. Collecting content comes first because a collage site depends on its raw material.

1

Gather the raw material

YOU · ~1 WEEK

- A photoshoot with 6–10 strong, full-body poses on a plain background, so they're easy to cut out
- Pick 3 hero projects and 6–12 more. For each: cover image, short write-up, links
- List your best videos and posts with URLs and rough view counts
- The inspirations list: 4–8 things you love, each with one line on why
- A short bio, a longer bio, and your experience as a list of roles and dates
- Textures: scan paper, fabric, tape, ticket stubs, your own sketches

2 Lock the design system

TOGETHER · 2–3 DAYS

- Confirm fonts, the fixed navy and oxford, and the 4–6 accent palettes for the swap
- Define the collage kit: tape, halftone, cut-out mask, stamp, highlighter, circle, arrow, label
- Write these as design tokens and reusable components so they're consistent on every page

3 High-fidelity home and project page

TOGETHER · ~1 WEEK

- Turn frames 1–7 into a full-colour design with your real photos and content
- Design directly in code as a live prototype so the motion can be judged too. Figma is optional
- Check the phone layout early, because collage breaks first on small screens

4 Build in Next.js

CLAUDE + YOU · 1–2 WEEKS

- Scaffold with `create-next-app` (App Router, TypeScript)
- Build the collage kit components, then the home sections in frame order
- Projects as MDX files, so adding one later means adding one file
- The content wall reads from one data file of your videos
- Palette swap via CSS variables, remembered per visitor

5 Polish and harden

~3–4 DAYS

- Performance: compress the cut-outs, lazy-load embeds, use `next/image` everywhere
- Accessibility: readable contrast in every palette, alt text, a reduced-motion mode
- Share previews: a custom social card image for every page

Share previews: a custom social card image for every page

6 Launch on Vercel

1 DAY

- Push to GitHub, import into Vercel, connect your domain
- Turn on Vercel Analytics to see which work gets viewed
- Add the site link to every social bio

TECH

Stack and project shape

FRAMEWORK	Next.js (App Router) + TypeScript
STYLING	Tailwind CSS with design tokens as CSS variables
MOTION	Motion (formerly Framer Motion) for hover, parallax and draggable items
CONTENT	MDX for projects, a typed data file for videos and experience
VIDEO	Lightweight embeds that load the player only on click
EMAIL SIGNUP	Optional: Buttondown or ConvertKit, added later
HOSTING	Vercel (free tier) + your own domain

```

BEFORE PHASE 1

What I need from you next

Your handles

Which platforms are you on, and what's your username on each?

Top 3 projects

Name your three strongest projects or videos. They set the tone for the whole site.

Photos

Do you already have pose shots you like, or should we plan a shoot?

Domain

Do you own a domain yet? If not, which name do you want?

Your 4–8 loves

Beyond JoJo and Ralph Lauren, what else belongs on the inspirations wall?

Tone of voice

Should the writing sound deadpan, hype, or somewhere in between?
